

## CAD Services

DAP specialise in fast and convenient CAD services to Design, Engineering, Manufacturing and Construction companies. Outsourced CAD services allow clients to optimise internal resources and focus on core activities such as innovation and creative design.

We work closely with clients to understand their ideas and design concepts whilst using our lower cost CAD providers to enter the required information in the selected software format.

Our CAD offering ranges from 2D drafting through to advanced 3D surface modelling and analysis. We don't mind the mundane projects either, they're usually easy to hive off and this frees up a company's creative people to do value-added work.
